Tubular Daylighting Technologies
for Learning

Innovative natural lighting that helps students and teachers live, learn and feel better.

Access to daylight is an important element in the learning environment. Using Solatube Tubular Daylighting Devices (TDDs) provides a solution for improving an educational environment and does more than simply brighten up a space.

Solatube TDDs feature innovative optical technologies that balance light output and thermal performance, delivering optimal light levels without glare or shifting patterns of light. Great for retrofit and new construction, TDDs are easily adaptable to existing structures and fit into T-Bar ceilings without any structural modifications. Solatube daylighting devices minimize uncomfortable heat gain and help reduce HVAC operating costs. Dimmers add flexibility to lighting levels and help maintain visual comfort.

The delivery of quality daylight to the school environment has been shown to improve concentration, reduce behavioral issues and foster greater student achievement. It also promotes lower absenteeism and higher employee retention. And that's just the beginning.

Pivotal studies, such as those performed by the Heschong Mahone Group (HMG), found a high correlation between schools that reported improvements in student standardized test scores and those that reported greater amounts of daylight in the classroom. Students with the most daylight in their classrooms scored 20% higher on math tests and 26% higher on reading tests in one year than those with the least*.
